

SPEKTOR Cascade Forensics receives Highly Commended accolade at the 2017 ADS Security Innovation Awards

Evidence Talks, global leaders in its sector, continues to receive recognition for its pioneering advances in digital forensics techniques, securing a Highly Commended accolade for SPEKTOR Cascade Forensics at the 2017 ADS Security Innovation Awards.

This highlights the core capabilities of SPEKTOR Cascade Forensics in providing a smarter way of moving from digital triage to full forensic analysis via automated forensic workflows.

Based on Evidence Talks' SPEKTOR triage technology, this recent global offering accelerates the delivery of forensic processing results within a standardised framework to increase efficient use of human and technical resources by automating multiple forensic tools and processes.

Elizabeth Sheldon, CEO of Evidence Talks, receives the Highly Commended accolade for SPEKTOR Cascade Forensics

Accepting the title on behalf of the company, CEO Elizabeth Sheldon said “Receiving recognition from one of the industry’s most respected platforms, and so soon after SPEKTOR Cascade Forensics’ official launch, is a real honour.

This system moves digital triaging into a new dimension, consolidating the entire process and bringing increased efficiencies to various types of very specific casework requirements in the delivery of full forensic analysis, and all within an ISO 17025 compliant solution.”

With its policy driven, automated and product agnostic features, SPEKTOR Cascade Forensics is set to be particularly beneficial in bringing high volume, low impact or ‘burst demand’ type cases to a much more cost-efficient and rapid conclusion.

The SPEKTOR Cascade Forensics model reduces lengthy bail delays, enabling investigating officers to meet the desired 24-hour charge window and early discard of non-evidential items.

The annual ADS Security Innovation Award identifies and celebrates innovation across the UK’s security industry. By recognising new solutions and capabilities, UK businesses are encouraged to continue investing in innovation in order to compete successfully in tough global markets.
